An Introduction to Git and Github

Poruri Sai Rahul, Software Developer, Enthought Inc. Why?

Why?

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

Why?

- Made a change to code, realised it was a mistake and wanted to revert back?
- Lost code or had a backup that was too old?
- Had to maintain multiple versions of a product?
- Wanted to see the difference between two (or more) versions of your code?
- Wanted to prove that a particular change broke or fixed a piece of code?

- Why?
- What?
 - ∘ Git
 - GitHub
- How?
 - Basic
 - Advanced

Why? (continued)

- Wanted to review the history of some code?
- Wanted to submit a change to someone else's code?
- Wanted to share your code, or let other people work on your code?
- Wanted to see how much work is being done, and where, when and by whom?
- Wanted to experiment with a new feature without interfering with working code?

What?

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

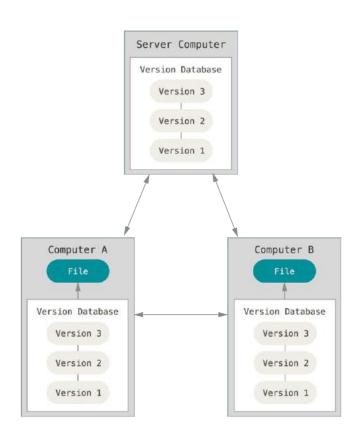

What? - Git

- One of many Distributed Version Control Software
- Hg and <u>SVN</u> are two other popular alternatives

What? - Git (continued)

What? - Distributed Version Control software

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

What? - Github

- For a beginner it's a place to backup all of your code
- For a professional it's a place to collaboratively develop software

How?

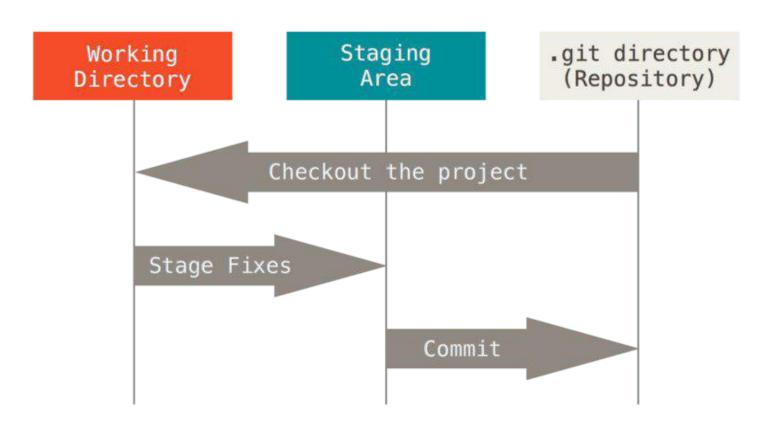

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

How? - Workflows

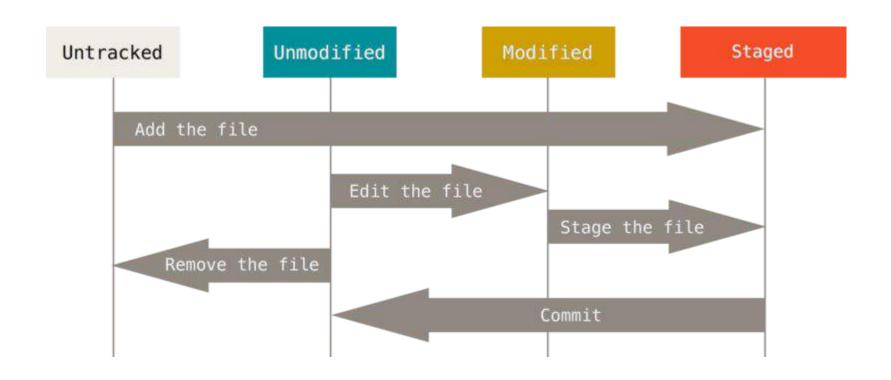

- A Basic workflow, which introduces commands for single user to get up and running with Git.
- An advanced workflow, which introduces commands that allow multiple users to work on the same repository(?).

repository - a directory being tracked/versioned using Git.

How? - Basic Workflow

How? - Basic Workflow (continued)

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

How? - Basic Workflow

- git add 'file-name'
- git commit -m "commit message"
- git push

• Why?

How? - Basic workflow (continued)

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

What is happening behind the scenes?

• Why?

First mistake - Not a Git repository

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

```
rahulporuri — -bash — 70×5

~$ git status
fatal: Not a git repository (or any of the parent directories): .git

~$ ||
```

Why?

Second mistake - defaults aren't set

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

```
ab-tmp (master)$ git commit
[master (root-commit) cfa7b85] ealsdjaldfkj
Committer: Poruri Sai Rahul <rahulporuri@Prashants-MacBook-Pro.local>
Your name and email address were configured automatically based
on your username and hostname. Please check that they are accurate.
You can suppress this message by setting them explicitly:
    git config --global user.name "Your Name"
    git config --global user.email you@example.com

After doing this, you may fix the identity used for this commit with:
    git commit --amend --reset-author

1 file changed, 0 insertions(+), 0 deletions(-)
    create mode 100644 me
```

Why?

Third mistake - Origin hasn't been set

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

```
[ab-tmp (master)$ git push
fatal: No configured push destination.
Either specify the URL from the command-line or configure a remote repository using
    git remote add <name> <url>
and then push using the remote name
    git push <name>
```

• Why?

What? - Basic workflow (continued)

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

- Helpful commands
 - git log
 - git show 'commit-hash'
 - git commit --amend
 - git reset HEAD^
 - git diff 'file-name'

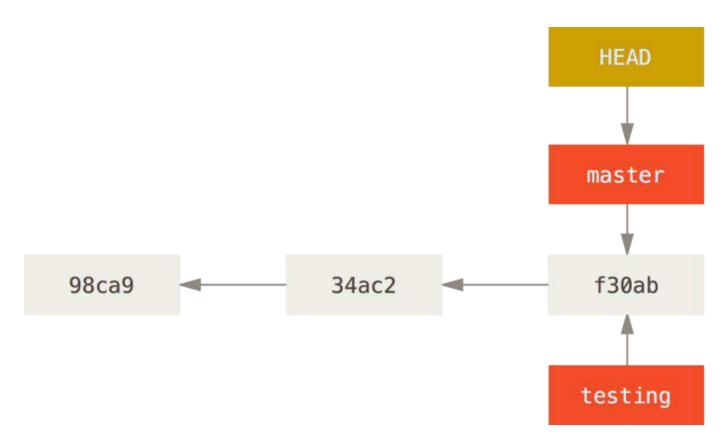

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

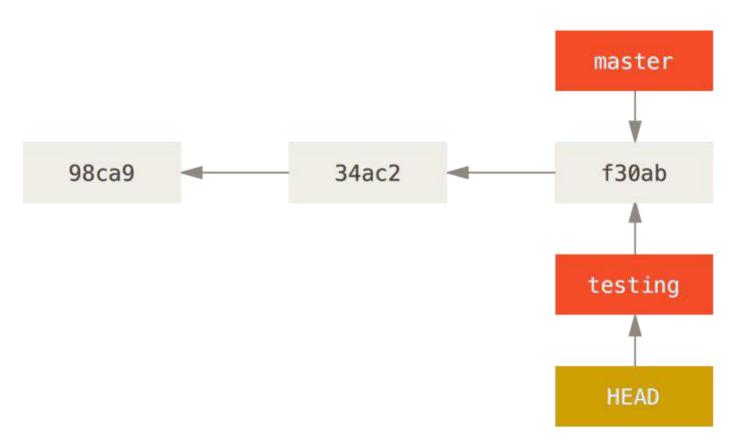

Advanced Workflow

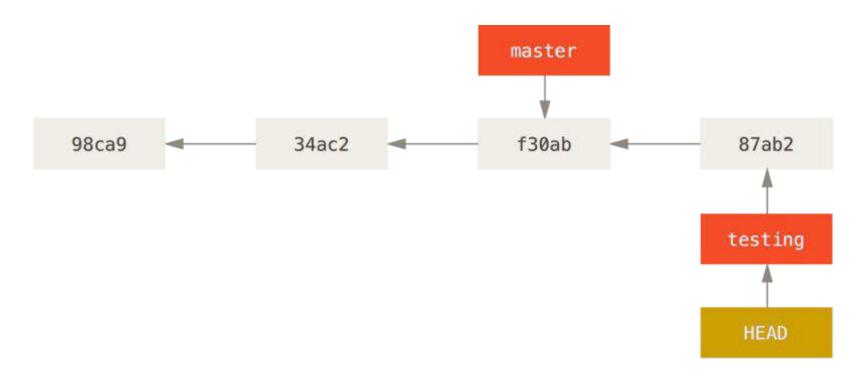

- git branch 'branch-name'
- git checkout 'branch-name'
- git add
- git commit
- git push origin 'branch-name'
- git merge 'branch-name'

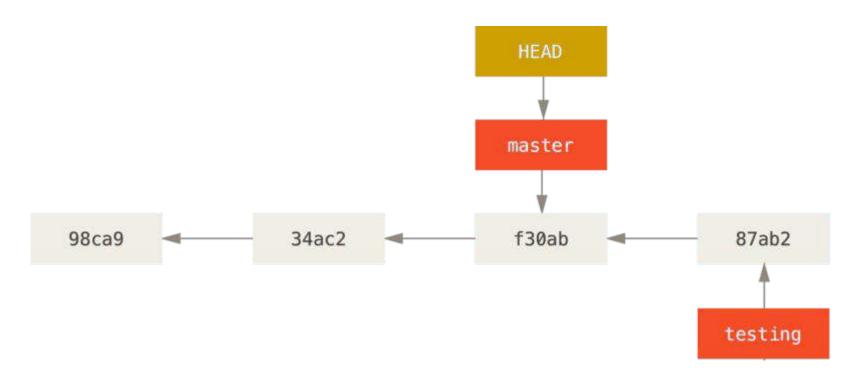

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

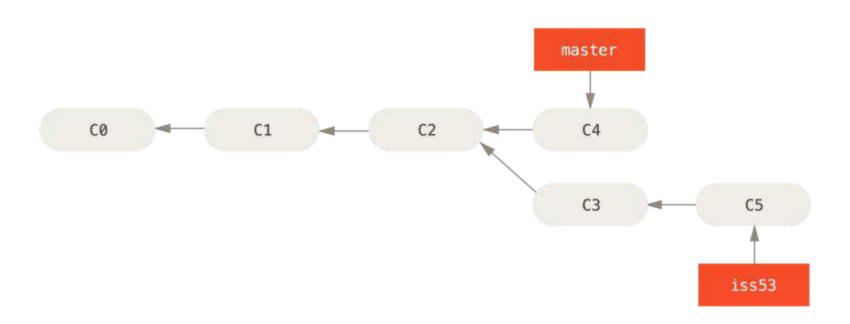

What's happening behind the scenes?

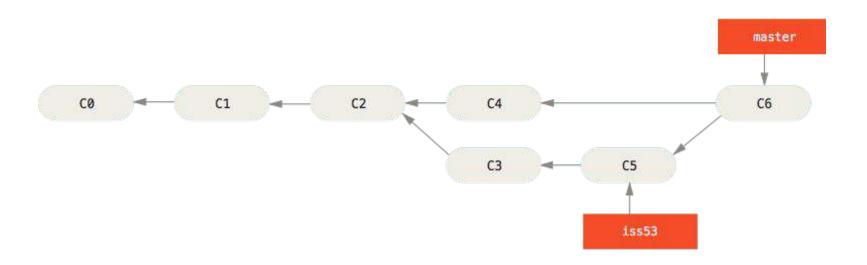

• Why?

How? - Advanced Workflow (continued)

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

Helpful commands

- git branch -l
- git branch -d 'branch-name'

Why?

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

Fourth mistake - Merge conflicts

• Why?

- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

Fourth mistake - Merge conflicts (continued)

```
ab-tmp — vim me — 33×13
  ...a-import - - bash
                     ...ab-tmp - vim me >>
    <<<<< HEAD
    asdfasdfasdfasdf
    asdf
    asdfasdf
    asdf
    asdfasd
    asdasdff
  9 >>>>> test
                   1,8
                                  All
me
```

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

Time travel using Git

• Using git checkout to travel back in time.

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

Correcting your mistakes

Using git revert 'commit-hash' to correct your mistakes

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

Rewriting history

• Using git reset 'commit-hash' to undo commits and bring back changes to the staging area.

- Why?
- What?
 - Git
 - GitHub
- How?
 - Basic
 - Advanced

Prepare for mind=blown

- git bisect and how it can be used to pinpoint breaking changes.
- Followed by git blame to play the blame game
